

GUIDELINES PRE PEST-CONTROL TREATMENT

- Open all curtains and close windows.
- Put pets outside and secure.
- For exterior sprays please ensure your dog is either off the property or secured approximately 10m away from your home.
- Cover fish bowls and tanks with a waterproof cover and turn off/unplug the filter.
- Cover or put all children's toys away.
- Cover baby's crib or cot.
- Cover or put all exposed food away.
- All eating and food preparation surfaces should be covered and wiped with a wet soapy cloth after treatment.
- Put all bathroom items away i.e. toothbrushes, toilet paper and close the toilet seat.
- Please ensure your bed and pillows are covered with a sheet that will need to be washed afterwards. If you do not have enough coversheets for your personal items such as your bed/pillows I will cover them for you.
- Clear floor space & generally de-clutter. (we treat baseboards, corners, cracks, and crevices)

GUIDELINES POST PEST-CONTROL TREATMENT

- Stay out of the house for 3 hours or if sensitive to odours and chemicals 4 hours.
- On return open windows to ventilate thoroughly when you return after three or four hours.
- For best results the product needs to be where pests will be so there maybe overspray on your windows. This can be wiped off your window with a damp cloth, only use water as other chemicals can reduce the effectiveness of the treatment.
